## NATIONAL CENTER FOR EDUCATION STATISTICS

## **Statistics in Brief**

**March 2001** 

# Revenues and Expenditures for Public Elementary and Secondary Education: School Year 1998–99

Over \$347 billion of revenues were raised to fund public education for grades prekindergarten through 12 in school year 1998–99. Current expenditures (those excluding construction, equipment, and debt financing) came to \$303 billion. Three out of every five current expenditure dollars were spent on teachers, textbooks, and other instructional services and supplies. An average of \$6,508 was spent on each student—an increase of 5.2 percent from \$6,189 in school year 1997–98 (in unadjusted dollars).

Contact: Frank Johnson (202) 502-7362 These and other financial data on public elementary and secondary education are collected and reported each year by the National Center for Education Statistics (NCES), U.S. Department of Education. The data are part of the "National Public Education Financial Survey" (NPEFS), one of the components of the Common Core of Data (CCD) collection of surveys.

#### Revenues for Public Elementary and Secondary Education

Over \$347 billion were collected for public elementary and secondary education for school year 1998–99 in the 50 states and the District of Columbia (table 1). Total revenues ranged from a high of around \$40 billion in California, which serves about 1 out of every 8 students in the nation, to a low of about \$709 million in North Dakota, which serves about 1 out of every 405 students in the nation. Nationally, revenues increased an average of 6.6 percent over previous year's revenues of \$326 billion (in unadjusted dollars).\*

<sup>\*</sup>Comparisons are based on the previous edition of this report, *Revenues and Expenditures for Public Elementary and Secondary Education: School Year 1997–98* (Johnson 2000).

By far, the greatest part of education revenues came from nonfederal sources (state, intermediate, and local governments), which together provided about \$323 billion or 92.9 percent of all revenues. (Definitions of terms used throughout this report, including state, intermediate, and local revenues, are provided at the end of the text.)

The federal government contribution to education revenues made up the remaining \$25 billion. (These numbers do not add up to \$347 billion due to rounding.) The relative contributions from these levels of government can be expressed as portions of the typical education dollar (figure 1). For school year 1998–99, local and intermediate sources made up 44 cents of every dollar in revenue; state revenues comprised 49 cents; and the remaining 7 cents came from federal sources.

Among states with more than one school district, revenues from local sources ranged from 14.0 percent (New Mexico) to 87.1 percent (New Hampshire) of total revenues (table 2). Hawaii and the District of Columbia have only one school district each and thus are not comparable to other states. Revenues from state sources also showed a wide distribution in their share of total revenues. The state revenue share of total revenues was less than 30 percent in New Hampshire (8.9 percent), and more than 70 percent in Vermont (74.4 percent) and New Mexico (72.5 percent). Federal revenues ranged from 3.7 percent in New Jersey to 14.0 percent in Mississippi. Federal revenues made up 16.5 percent of total revenues in the District of Columbia.

# **Current Expenditures for Public Elementary and Secondary Education**

Current expenditures for public education in 1998–99 totaled about \$303 billion (table 3). This represents a \$17 billion (6.1 percent) increase over expenditures in the previous school year (\$285 billion in unadjusted dollars). About \$187 billion in current expenditures went for instruction. Another \$103 billion were expended for a cluster of services that support instruction. Over \$13 billion were spent on noninstructional services.

When expressed in terms of the typical education dollar, instructional expenditures accounted for 62 cents of the education dollar for current expenditures (figure 2). Instructional expenditures include teachers' salaries and benefits, supplies (e.g., textbooks), and purchased services. About 34 cents of the education dollar went for support services, which include operation and maintenance of buildings, school administration, transportation, and other student and school support activities (e.g., student counseling, libraries, and health services). Approximately 4 cents of every education dollar went to noninstructional activities, which include school meals and enterprise activities, such as bookstores.

Most states were closely clustered around the national average (61.7 percent) in terms of the share of current expenditures that were spent on instruction; all but three states and the District of Columbia spent more than 58.0 percent of their current expenditures on instruction (table 4). These states were Alaska, Kansas, and New Mexico. Two states spent more than two-thirds of their current expenditures on

instruction. These states were New York (67.8 percent) and Maine (67.3 percent).

#### **Current Expenditures per Student**

In 1998-99, the 50 states and the District of Columbia spent an average of \$6,508 in current expenditures for every pupil in membership (table 5). This represents a 5.2 percent increase in current expenditures per student from the previous school year (\$6,189 in unadjusted dollars). Three states—New Jersey (\$10,145), New York (\$9,344), and Connecticut (\$9,318) expended more than \$9,000 per pupil. The District of Columbia, which comprises a single urban district, spent \$9,650 per pupil. Only one state, Utah, had expenditures of less than \$4,500 for each pupil in membership (\$4,210). The median per pupil expenditure was \$6,110, indicating that one-half of all states educated students at a cost of less than \$6,110 per student.

On the average, for every student in 1998–99, about \$4,013 was spent for instructional services, \$2,213 was expended for support services, and \$282 was spent for noninstructional purposes.

### **Total Expenditures**

Total Expenditures include all types of expenditures by school districts and other public elementary/secondary education agencies. Researchers generally use current expenditures instead of total expenditures, when comparing education spending between states or across time. Current expenditures exclude expenditures for capital outlay, which tend to have dramatic increases and decreases. Also, the current

expenditures commonly reported are for public elementary and secondary education only. School districts also support community services, adult education, private education, and other programs. These programs and the extent to which they are funded by school districts vary greatly both across states and within states.

Total expenditures for the nation totaled nearly \$356 billion in the 1998–99 school year (table 6). About \$303 billion of total expenditures were current expenditures for public elementary and secondary education. An additional \$32 billion went for facilities acquisition and construction, \$8 billion for replacement equipment, and another \$8 billion for interest payments on debt. The remaining amount (\$5 billion) was spent on other programs that are not part of public elementary and secondary.

#### **Technical Notes**

The National Public Education Financial Survey (NPEFS) is an annual state-level collection of revenue and expenditure data for public education in grades prekindergarten through 12. It is part of the Common Core of Data (CCD) collection of surveys of administrativerecords data relating to public elementary and secondary education. Revenues and expenditures are audited after the close of the fiscal year and are then submitted to NCES by each state education agency. Additionally, explanations for all missing and zero values are collected from states. The data are processed and edited by NCES and verified by each state education agency (SEA).

NCES has made adjustments for missing

data. Values that were missing and not reported elsewhere on a state's survey form were imputed. The method used for all imputations was to: (a) create a subset of states reporting the item in question; (b) subtract the value for that item from each state's total revenues (or expenditures); (c) compute the ratio of that item to the reduced total (step b) for each state; (d) compute the average of these ratios; (e) multiply the total revenues (or expenditures) of the state with the missing item by the average ratio; and (f) substitute the imputed estimate for the missing item and then re-compute the subtotals and totals. Local revenues from student activities and expenditures for enterprise operations were imputed for Connecticut, Louisiana, and Virginia.

Other adjustments were made when a single value was reported for two or more items. NCES distributed portions of the single state reported value to the missing item(s). In most cases, these distribution types of adjustments did not affect total revenues or total expenditures. For more information on these adjustments, the reader should refer to the documentation for the National Public Education Financial Survey: School Year 1998–99 data file.

NCES accepts revision to these data from SEAs for one year, and releases the revised data at the end of this period.

### **For More Information**

This report used information from the Common Core of Data, "National Public Education Financial Survey: School Year 1998–99" and "State Nonfiscal Survey of Public Elementary and Secondary Education: School Year 1998–99 Revised." For more information about this Statistics in Brief or the data set, contact Frank Johnson, National Center for Education Statistics, 1990 K Street NW, Washington, DC 20006–5651; or call (202) 502–7362; fax (202) 502–7475; or e-mail frank.johnson@ed.gov.

#### **Definitions**

Current expenditures are those for the day-to-day operation of schools. They include all expenditures except those associated with repaying debts, capital outlays (e.g., purchases of land, school construction and repair, and equipment), and programs outside the scope of preschool to grade 12, such as adult education, community colleges, and community services. Expenditures for items lasting more than one year (e.g., school buses and computers) are not included in current expenditures.

Facilities acquisition and construction expenditures include expenditures for new school construction, including renovation and expansion. They also include expenditures on land, existing buildings, and equipment for new and remodeled facilities.

Federal revenues include direct grants-inaid to schools or agencies, funds distributed through a state or intermediate agency, and revenues in lieu of taxes to compensate a school district for nontaxable federal institutions within a district's boundary.

**Instructional expenditures** are current expenditures for activities directly associated with the interaction between

teachers and students. These include teacher salaries and benefits, supplies (e.g., textbooks), and purchased instructional services.

**Interest on debt expenditures** are expenditures for interest on long-term debt (i.e., obligations of more than one year).

Intermediate revenues come from sources that are not local or state education agencies, but operate at an intermediate level between local and state education agencies and possess independent fundraising capability, for example, county or municipal agencies.

Local revenues include revenues from such sources as local property and nonproperty taxes, investments, and revenues from student activities, textbook sales, transportation and tuition fees, and food service revenues.

Noninstructional expenditures go mostly towards food service, with some expenditures going towards enterprise operations, such as bookstores and interscholastic athletics.

Other program expenditures include expenditures for community services, adult education, community colleges, private schools and other programs that are not part of public elementary and secondary education.

Replacement equipment expenditures include expenditures for equipment for schools that are not new or recently renovated. Equipment is generally defined as items that last more than one year, are repaired rather than replaced, and have a

cost over a level set by the state or local education agencies.

State revenues include both direct funds from state governments and revenues in lieu of taxation. Revenues in lieu of taxes are paid to compensate a school district for nontaxable state institutions or facilities within the district's boundary.

**Student membership** is the count of students enrolled on or about October 1.

Support services expenditures are current expenditures for activities that support instruction. These services include operation and maintenance of buildings, school administration, student support services (e.g., nurses, therapists, and guidance counselors), student transportation, instructional staff support (e.g., librarians, instructional specialists), school district administration, business services, research, and data processing.

Total expenditures for public elementary and secondary education and other programs include current expenditures for public elementary and secondary education, and expenditures for facilities acquisition and construction, replacement equipment, other programs and interest on debt.
